

ARCHITECTURAL SPECIFICATION & FLOWCHART REPORT

1. EXECUTIVE SUMMARY & ZERO-TRUST ARCHITECTURE

This specification details the **Dual-Personality OSINT Framework**. **Parla** operates as the ethical Blue-Team engine (performing PII redaction, entity resolution, and NATO A1 Admiralty scoring). **Varla** acts as the adversarial Red-Team shadow (synthesizing darkweb evasion vectors, disinfo noise, and EXIF spoofing to regression-test Parla). The **VoidNode Rust Core** enforces SHA-256 Merkle proof auditability and fail-closed zero-trust payload routing.

2. SYSTEM ARCHITECTURE & ENTANGLEMENT FLOWCHART

3. RUST VOIDNODE SPECIFICATION & PROTOCOL MAP

Component	Implementation Standard	Security Assurance
Rust VoidNode Bridge	Zero-Trust Fail-Closed Memory Pipe	Memory Safe (Rust)
SHA-256 Merkle Engine	Binary Leaf & Root Proof Verification	Tamper-Proof Audit
Post-Quantum Engine	NIST FIPS 204 ML-DSA Signatures	Quantum Resistant
A2A Monetization	HTTP 402 x402 Crypto Paywall	USDT/USDC Settlement
